

STATE OF MICHIGAN
IN THE THIRD JUDICIAL CIRCUIT FOR THE COUNTY OF WAYNE
FAMILY DIVISION, DOMESTIC RELATIONS

ADRIENNE MARJORIE ROCKENHAUS,
Plaintiff/Counter-Defendant,

v.

CONRAD ALAN ROCKENHAUS,
Defendant/Counter-Plaintiff.

Case No. **26-104594-DO**

Hon. **Nicole N. Goodson**

DEFENDANT/COUNTER-PLAINTIFF'S CHAIN OF CUSTODY SUPPLEMENT: SHA-256 HASH MANIFEST FOR MAY 12-13, 2026 SCRAPE EVIDENCE

I. PURPOSE

1. This Chain of Custody Supplement is filed in support of Defendant/Counter-Plaintiff's Emergency Motion for Preservation Order and Order Prohibiting Spoliation of Evidence, filed contemporaneously herewith. It documents the cryptographic integrity of the public-record Twitter scrape datasets referenced in that Motion at §III.G ¶31 ("the May 12, 2026 Scrape Evidence," used in the Motion and herein as a collective reference to the captures made on both May 12 and May 13, 2026).

II. CAPTURE METHODOLOGY

2. The scrape datasets were captured between approximately 22:21 UTC on May 12, 2026 and 01:01 UTC on May 13, 2026 by Defendant using the Apify platform's tweet-scraper actor (<https://apify.com>). Each capture targeted specified X (formerly Twitter) account handles, conversation identifiers, or date ranges via the actor's input parameters. The actor returned aggregated tweet records as JSON arrays containing platform-native metadata fields including, but not limited to, tweet identifiers, conversation identifiers, in-reply-to identifiers, author profile information, timestamps in Twitter time format, source application identifiers, and user_mentions entities.
3. Each capture was saved as a single JSON file with a filename incorporating the targeted account or query subject and the UTC timestamp of capture completion. The files have not been modified after capture other than by file-naming. The contents are byte-for-byte identical to the data returned by the Apify actor.

III. SHA-256 HASH MANIFEST

4. The following table identifies each of the eighteen scrape files comprising the May 12, 2026 Scrape Evidence by filename, captured size in bytes, and SHA-256 cryptographic hash. The hash values were computed at approximately 02:00 UTC on May 13, 2026 using the Python `hashlib.sha256` implementation. Verification of any file's hash against the table value confirms the file is byte-for-byte identical to the captured original.

5. Aggregate size of the eighteen scrape files: 119,557,279 bytes (approximately 114 MB). Aggregate captured tweet record count: approximately 14,500 unique tweet entries across the targeted accounts and conversation identifiers.

IV. CUSTODY STATEMENT

6. Defendant has retained the eighteen scrape files in their original byte-for-byte form. Defendant has not modified the JSON content of any file. The files are preserved in Defendant's Google Workspace cloud storage and on local working copies. Defendant will, on request of the Court or Plaintiff/Counter-Defendant, supply any or all of the files for independent SHA-256 verification or for substantive review.
7. Defendant declares under penalty of perjury that the foregoing statements regarding the capture, naming, hashing, and custody of the May 12, 2026 Scrape Evidence files are true and correct to the best of his knowledge, information, and belief.

Respectfully submitted,

/s/ Conrad A. Rockenhaus
