

STATE OF MICHIGAN
IN THE THIRD JUDICIAL CIRCUIT FOR THE COUNTY OF WAYNE
FAMILY DIVISION, DOMESTIC RELATIONS

ADRIENNE MARJORIE ROCKENHAUS,
Plaintiff/Counter-Defendant,

v.

CONRAD ALAN ROCKENHAUS,
Defendant/Counter-Plaintiff.

Case No. **26-104594-DO**

Hon. **Nicole N. Goodson**

**DEFENDANT/COUNTER-PLAINTIFF'S SECOND CHAIN OF CUSTODY
SUPPLEMENT: SHA-256 HASH MANIFEST FOR MAY 14, 2026 SCRAPE
EVIDENCE; OPERATIONAL-SILENCE OBSERVATION; CROSS-
PLATFORM SYNCHRONIZATION FINDING**

I. PURPOSE

1. This Second Chain of Custody Supplement is filed in further support of Defendant/Counter-Plaintiff's Emergency Motion for Preservation Order and Order Prohibiting Spoliation of Evidence, filed on May 13, 2026, and is a continuation of the Chain of Custody Supplement (the "First Supplement") filed contemporaneously with that Motion. By Order entered May 14, 2026, this Honorable Court denied the emergency framing of that Motion while leaving the Motion alive on the regular docket for hearing on ePraecipe. This Second Supplement therefore supports both the preserved evidentiary record and the pending Motion as it proceeds on the regular docket.
2. This Second Supplement adds to the chain-of-custody record three additional public-record Twitter scrape datasets captured on May 14, 2026 covering the period from May 12, 2026 forward (collectively, the "May 14, 2026 Scrape Evidence"). It further reports two observations that follow from comparison of the May 14, 2026 Scrape Evidence with the May 12, 2026 Scrape Evidence already on the record: (a) the operational silence of the monitored X-network accounts since May 12, 2026, and (b) a cross-platform temporal synchronization on May 9, 2026 between an electronic mail message sent to witness Ann Helgren and an X-platform reply by the account @spuntpatrol.

II. CAPTURE METHODOLOGY

3. The May 14, 2026 Scrape Evidence datasets were captured on May 14, 2026 between approximately 22:02 UTC and 22:03 UTC by Defendant/Counter-Plaintiff Conrad Rockenhaus using the Apify platform's apidojo/tweet-scraper actor (<https://apify.com>), the same actor used for the May 12, 2026 Scrape Evidence captures.
4. Three separate queries were submitted to the actor. The first query was a multi-handle date-bounded query covering the twelve X account handles preserved in the May 12, 2026 Scrape Evidence (adezero, spuntpatrol, LeighCheri_, phatadvert, AllysonClermont, 4chantress, alg0queen, LuceMargarita, blackjakkkk, PunkyHomegirl, picklepickleg, plratech) with date parameters start: 2026-05-12 and end: 2026-05-15, configured

with maxItems: 1000, sort order Latest, and language filter English. The second query targeted the conversation tree of the May 8, 2026 "Dead Man's Switch" broadcast tweet (conversation identifier 2052837253408280726). The third query was an open mentions search targeting replies to @spuntpatrol or @adezero since May 12, 2026.

- Each capture was saved as a single JSON file with a filename incorporating the UTC timestamp of capture completion. The files have not been modified after capture other than by file-naming. The contents are byte-for-byte identical to the data returned by the Apify actor.

III. OPERATIONAL-SILENCE OBSERVATION

- The May 14, 2026 Scrape Evidence establishes that no monitored X-network account has posted any new tweet on the X platform between May 12, 2026 and May 14, 2026. Across the full 1,000-record sample returned by the multi-handle query, the latest activity by any of the twelve monitored accounts is identified in the following table:

Account	Last activity (UTC)
@spuntpatrol	Sat May 09, 2026 18:51
@adezero	Sat Apr 11, 2026 19:43
@4chantress	Sun Apr 05, 2026 15:27
@p1ratech	Wed Apr 01, 2026 09:35
@phatadvert	Sun Mar 29, 2026 23:09
@LeighCheri_	Sat Mar 28, 2026 12:55
@alg0queen	Mon Mar 23, 2026 02:11
@LuceMargarita	Wed Mar 18, 2026 14:06
@PunkyHomegirl	Wed Mar 18, 2026 14:07
@blackjakkkk	Wed Mar 18, 2026 05:54
@AllysonClermont	Wed Mar 18, 2026 00:59
@picklepickleg	Tue Mar 17, 2026 16:15

- The May 14, 2026 Scrape Evidence further establishes that no new replies have been posted to the May 8, 2026 "Dead Man's Switch" conversation tree since the May 12, 2026 capture. The conversation tree remains at three replies (BiancaWestfall, lordofsinatra, spuntpatrol) as preserved in the May 12, 2026 Scrape Evidence.
- The May 14, 2026 Scrape Evidence further establishes that no third-party X account has posted any reply or mention directed to @spuntpatrol or @adezero since May 12, 2026. The open-mentions query returned the "noResults" marker.
- Defendant/Counter-Plaintiff does not assert that the operational silence of the monitored X-network accounts indicates cessation of the underlying coordinated witness-intimidation activity. To the contrary, paragraph 17 below identifies parallel activity on other platforms during the same period, indicating that the witness-targeting operation has continued but has migrated from X to other platforms with weaker public-record scraping infrastructure.

IV. CROSS-PLATFORM SYNCHRONIZATION FINDING: MAY 9, 2026

- Comparison of the May 14, 2026 Scrape Evidence with the documentary record of the ecigaretteslut@gmail.com email messages received by witness Ann Helgren on May 9, 2026 (as preserved on Witness Helgren's email account and as further authenticated in her Comprehensive Witness Affidavit being executed contemporaneously herewith) reveals a temporal synchronization at three-minute resolution between an electronic mail message and an X-platform reply.

11. The synchronization is as follows:

UTC Time	EDT Time	Platform	Event
09:31:00	05:31:00 AM	Gmail	First ecigaretteslut@gmail.com email to Ann Helgren, subject content concerning the alleged death of Defendant/Counter-Plaintiff
10:06:00	06:06:00 AM	Gmail	Second ecigaretteslut@gmail.com email to Ann Helgren, content asserting she had "left him to burn and rot"
10:09:22	06:09:22 AM	X	@spuntpatrol reply in DMS conversation tree (tweet identifier 2053054715122888881) reading verbatim: "@lordofsinatra @KiwiFarmsDotNet He's dead."

12. The @spuntpatrol reply identified in paragraph 11 was posted three minutes and twenty-two seconds after the second ecigaretteslut@gmail.com email to Witness Helgren. Both communications advance the same factual assertion (that Defendant/Counter-Plaintiff is deceased) across two different communication platforms on the same calendar day, in temporal proximity that is materially inconsistent with independent action by two separate uncoordinated actors.

13. The @spuntpatrol account is the operational anchor of the X-network coordinated activity preserved in the May 12, 2026 Scrape Evidence, including the May 8, 2026 "Dead Man's Switch" broadcast tweet that named witness Ann Helgren by name as one of the persons identified as "responsible for [Defendant/Counter-Plaintiff's] death." The ecigaretteslut@gmail.com sender weaponized the first and middle name of Witness Helgren's adult daughter ("Angeline M") as the email display name, indicating that the sender possessed specific personal knowledge of Witness Helgren's family relationships that has been disclosed to Plaintiff/Counter-Defendant Adrienne Marjorie Rockenhaus through Witness Helgren's longstanding personal friendship with her.

14. The three-minute, twenty-two-second synchronization between the second ecigaretteslut@gmail.com email and the @spuntpatrol "He's dead" reply is direct evidence of cross-platform coordination of the witness-intimidation narrative against Witness Helgren. The synchronization is offered for two evidentiary purposes: (a) to support the inference that the @spuntpatrol account and the ecigaretteslut@gmail.com sender are either the same operator or are operating in real-time coordination; and (b) to support the broader inference that the operation is centrally directed, contradicting any account in which the X-network harassment, the email harassment, and the related Facebook activity have independent origins.

V. OPERATIONAL MIGRATION OBSERVATION

15. The X-network operational silence documented in §III above does not signal cessation of the coordinated witness-intimidation activity. Between May 9, 2026 and the date of this Supplement, the coordinated activity has continued, but has migrated to communication platforms other than X:

Date (2026)	Platform	Event
May 5 to 6	Facebook (Meta)	"Demi-Jo Matthews" account commented on Witness Helgren's own April 24, 2026 photograph ("Is that right before you killed him?"); shared the May 4, 2026 "Dead Man's Switch" post into the 1,700-member "Michigan Missing Persons Alerts" Facebook group
May 9		Two ecigaretteslut@gmail.com / "Angeline M" emails to Witness Helgren

(morning) Gmail as identified in §IV above

May 9 (X-
platform, X
before
silence) Final @spuntpatrol activity, including the "He's dead" reply identified in §IV above

May 14 Threads
(morning) (Meta) Threads platform contact attempt to Witness Helgren from an account presenting Defendant/Counter-Plaintiff's name and image, in the form of a Threads friend request, made without Defendant/Counter-Plaintiff's authorization

16. The pattern of migration is consistent with operational awareness of the public-record scraping and litigation-preservation posture of the X-network evidence already preserved in the May 12, 2026 Scrape Evidence. The operators of the coordinated activity have, by the timing pattern, demonstrated awareness that X is being preserved and have moved their activity to platforms with weaker scraping infrastructure or to direct one-to-one communication channels (email, Threads friend request) that are not publicly visible.
17. Defendant/Counter-Plaintiff requests that this Honorable Court treat the operational migration documented in this Supplement as an additional ground for entry of the requested Preservation Order, since the cross-platform migration of the coordinated activity creates a continuing and elevated risk of evidence loss on the migration-destination platforms (Meta-owned Facebook and Threads, and email service providers) absent immediate preservation directives.

VI. SHA-256 HASH MANIFEST

18. The following table identifies each of the three scrape files comprising the May 14, 2026 Scrape Evidence by filename, captured size in bytes, and SHA-256 cryptographic hash. The hash values were computed using the Python `hashlib.sha256` implementation.

Filename	Size (bytes)	SHA-256
dataset_tweet- scraper_2026- 05-14_22-02- 06-039.json	11,155,609	14275dd7fedc0c58eef48b894aacd9beff4e41d87203549957f48f681069be77
dataset_tweet- scraper_2026- 05-14_22-02- 15-830.json	7,309	512d5965c536d54d22d751fd58c525f9d1449ab0ba2cc03be5ef945027e2d782
dataset_tweet- scraper_2026- 05-14_22-02- 27-036.json	25	a716a5c7a0568f11009d07fa3a276a6f56951111d46f8320f40850368d1b642

19. The three foregoing files, together with the eighteen files identified in the First Supplement, constitute the complete Scrape Evidence record for the X-network coordinated activity captured between May 12, 2026 and May 14, 2026.

VII. CONTINUING PRODUCTION

20. Defendant/Counter-Plaintiff retains the three foregoing files on local storage in their original unmodified form, with their original captured filenames intact, and is willing to

produce them in their original Apify-returned form to this Honorable Court or to opposing counsel on subpoena duces tecum or other reasonable production directive.

Respectfully submitted,

Conrad Alan Rockenhaus

Defendant/Counter-Plaintiff, pro se
