

**STATE OF MICHIGAN**  
**IN THE THIRD JUDICIAL CIRCUIT FOR THE COUNTY OF WAYNE**  
**FAMILY DIVISION, DOMESTIC RELATIONS**

**ADRIENNE MARJORIE ROCKENHAUS,**  
Plaintiff/Counter-Defendant,

v.

**CONRAD ALAN ROCKENHAUS,**  
Defendant/Counter-Plaintiff.

Case No. **26-104594-DO**

Hon. **Nicole N. Goodson**

**DEFENDANT/COUNTER-PLAINTIFF'S THIRD CHAIN OF CUSTODY  
SUPPLEMENT (MAY 14, 2026 EXTENDED SCRAPE EVIDENCE)**

**I. INTRODUCTION**

1. This Third Chain of Custody Supplement is filed in further support of Defendant/Counter-Plaintiff's Emergency Motion for Preservation Order and Order Prohibiting Spoliation of Evidence (the "Pending Motion"), filed May 13, 2026. This Third Supplement is a continuation of the Chain of Custody Supplement filed May 13, 2026 (the "First Supplement") and the Second Chain of Custody Supplement filed contemporaneously herewith (the "Second Supplement").
2. This Third Supplement adds to the chain-of-custody record nine additional public-record X-platform scrape datasets captured on May 14, 2026 (the "May 14, 2026 Extended Scrape Evidence"). The datasets in this Third Supplement fall into three categories: (a) timeline captures of three X accounts in the network-adjacent space to the previously-identified amplification network (Joe Prich @JustCallMeJoeP, lordofsinatra and BiancaWestfall as a paired capture, and @rosebuttcheeks); (b) historical conversation-tree captures of five discrete X conversation threads from the @adezero account dating from December 11, 2025 through March 30, 2026; and (c) one negative-result query capture documenting an absence of quote-tweets to the May 8, 2026 "Dead Man's Switch" broadcast.
3. This Third Supplement, taken together with the First Supplement and the Second Supplement, provides the complete chain-of-custody record for the public-record X scrape datasets supporting the findings asserted in Defendant/Counter-Plaintiff's Supplemental Brief in Support of Pending Emergency Motion for Preservation Order and Order Prohibiting Spoliation of Evidence, filed contemporaneously herewith.

**II. PROCEDURAL POSTURE**

4. On May 13, 2026, Defendant/Counter-Plaintiff filed the Pending Motion together with the First Supplement, supporting the May 12, 2026 Scrape Evidence comprising eighteen public-record X scrape datasets. Both filings were accepted through the Third Judicial Circuit Court Applications (CCApps) filing system on the same date.
5. By Order entered May 14, 2026, this Honorable Court denied the emergency framing of the Pending Motion while leaving the Pending Motion alive on the regular motion docket. Defendant/Counter-Plaintiff submitted the required ePraecipe on May 14, 2026 at approximately 16:45 UTC.
6. On May 14, 2026, between approximately 22:02 UTC and 22:42 UTC, Defendant/Counter-Plaintiff captured additional public-record X-platform scrape datasets. Three of those datasets, comprising the captures performed between 22:02 UTC and 22:03 UTC, are inventoried in the Second Supplement filed contemporaneously herewith. The remaining nine datasets, comprising the captures performed between 22:14 UTC and 22:42 UTC, are inventoried in this Third Supplement.

**III. CAPTURE METHODOLOGY**

7. The May 14, 2026 Extended Scrape Evidence datasets were captured on May 14, 2026 between

approximately 22:14 UTC and 22:42 UTC by Defendant/Counter-Plaintiff Conrad Rockenhaus using the Apify platform's apidojo/tweet-scraper actor (<https://apify.com>), the same actor used for the May 12, 2026 Scrape Evidence captures inventoried in the First Supplement and for the May 14, 2026 Scrape Evidence captures inventoried in the Second Supplement.

8. The capture methodology was materially identical to that described in the First Supplement and the Second Supplement: Apify task runs were initiated with structured JSON query parameters specifying the target X account handles or conversation identifiers, the maximum item return count, the sort order, and the language filter ("tweetLanguage": "en" for all captures). Apify executed the queries against the X platform's public-facing API surface and returned the responsive tweet records as a JSON dataset. The JSON datasets were downloaded by Defendant/Counter-Plaintiff in their as-retained form, without modification, immediately upon completion of each Apify task run, and were stored on local disk at file paths under Defendant/Counter-Plaintiff's working directory in chronological order of capture.
9. Each JSON dataset preserves the raw return payload from the Apify actor, including all metadata fields populated by Apify and by X Corp., for each tweet record. No record was edited, redacted, or otherwise modified prior to or following download.

#### IV. INVENTORY AND DESCRIPTION

##### A. Network-adjacent account timeline captures

10. The first three datasets in the May 14, 2026 Extended Scrape Evidence are timeline captures of X accounts in the network-adjacent space to the twelve previously-monitored network accounts identified in the First Supplement.

| File                                               | Subject account(s)              | Records | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|----------------------------------------------------|---------------------------------|---------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| dataset_tweet-scraper_2026-05-14_22-15-26-024.json | @JustCallMeJoeP (Joe Prich)     | 766     | Timeline capture of the @JustCallMeJoeP account, self-attributed by @adezero on March 24, 2026 as the source of Plaintiff/Counter-Defendant's "name reversion" advice and identified as Plaintiff/Counter-Defendant's romantic partner since on or about March 28, 2026. Capture demonstrates continued X-platform posting by @JustCallMeJoeP through May 14, 2026 at 20:07 UTC, with content composition unrelated to the case-narrative coordination preserved in the May 12, 2026 Scrape Evidence. |
| dataset_tweet-scraper_2026-05-14_22-15-37-251.json | @lordofsinatra; @BiancaWestfall | 500     | Paired timeline capture of two X accounts adjacent to the coordinated amplification network. The @BiancaWestfall portion of this dataset supports the operational-amplifier finding set forth in §III.C of the Supplemental Brief filed contemporaneously herewith.                                                                                                                                                                                                                                   |
| dataset_tweet-scraper_2026-05-14_22-41-50-468.json | @rosebuttcheeks                 | 825     | Timeline capture of the @rosebuttcheeks account, named in the Pending Motion's account list. The complete @rosebuttcheeks timeline supports the documentary-attribution finding set forth in §III.A of the Supplemental Brief filed contemporaneously herewith, including the April 11, 2026 to April 25, 2026 three-tweet thread (tweet identifiers 2043052376794276350, 2046333254677012694, 2047968608601432411) and the May 12, 2026 retweet of the May 8, 2026 "Dead Man's Switch" broadcast.    |

##### B. Historical conversation tree captures

11. The next five datasets in the May 14, 2026 Extended Scrape Evidence are captures of discrete X conversation threads originating from or implicating the @adezero account during the period from December 11, 2025 through March 30, 2026. Each conversation thread is preserved as a self-contained dataset to maintain the integrity of the reply-tree metadata returned by Apify.

| File | Conversation date / | Records | Description |
|------|---------------------|---------|-------------|
|------|---------------------|---------|-------------|

| subject                                                        |                                                                        |    |                                                                                                                                                                                                                                                                                                                                                                                                   |
|----------------------------------------------------------------|------------------------------------------------------------------------|----|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| dataset_tweet-<br>scraper_2026-<br>05-14_22-20-<br>46-755.json | December 11,<br>2025: federal-<br>court<br>targeting                   | 8  | Seven-tweet sequence by @adezero on December 11, 2025 directing hostile content at the Office of the Clerk of the United States District Court for the Eastern District of Michigan (referenced in the public record as the "Richard Loury" sequence). Preserved for record continuity supporting the federal-targeting pattern referenced in Defendant/Counter-Plaintiff's Amended Counterclaim. |
| dataset_tweet-<br>scraper_2026-<br>05-14_22-21-<br>05-308.json | January 7,<br>2026: ADL /<br>Nazi Guards<br>FCI Milan                  | 2  | The originating January 7, 2026 @adezero tweet (tweet identifier 2008910835393904946) characterizing FCI Milan correctional officers as "Neo-Nazi." This tweet is the originating source content that @BiancaWestfall subsequently amplified in her January 12, 2026 original post identified in §III.C, paragraph 23 of the Supplemental Brief.                                                  |
| dataset_tweet-<br>scraper_2026-<br>05-14_22-20-<br>14-436.json | March 24,<br>2026: "digital<br>decapitation"<br>/ Prich<br>attribution | 9  | The @adezero conversation thread including tweet identifier 2036241895194521772 ("I literally just digitally decapitated myself because @JustCallMeJoeP kept telling me to drop the dead weight (last name)"), which is the canonical public-record attribution by Plaintiff/Counter-Defendant of the name-reversion advice to Joe Prich.                                                         |
| dataset_tweet-<br>scraper_2026-<br>05-14_22-20-<br>30-315.json | March 24,<br>2026:<br>monogamy /<br>non-<br>monogamy<br>framing        | 2  | The @adezero conversation thread including tweet identifier 2036509018512818208 ("Cheating isn't the same as non-monogamy"), preserved for record continuity supporting the timing analysis of the romantic-partner attribution.                                                                                                                                                                  |
| dataset_tweet-<br>scraper_2026-<br>05-14_22-21-<br>32-606.json | March 30,<br>2026:<br>OvenBenjamin<br>sequence                         | 14 | The @adezero conversation thread including tweet identifier 2038505186310910253 ("a real man like Joe step up"), which is a public-record characterization by Plaintiff/Counter-Defendant of her romantic-partner status with Joe Prich contemporaneous with the period of Defendant/Counter-Plaintiff's incarceration.                                                                           |

### C. Negative-result query capture

- The remaining dataset in the May 14, 2026 Extended Scrape Evidence is a negative-result query capture, returned by the Apify platform in response to a query for quote-tweets of the May 8, 2026 "Dead Man's Switch" broadcast. The capture is retained in the chain-of-custody record to document the absence of additional quote-tweet activity beyond that already preserved in the May 12, 2026 Scrape Evidence.

| File                                                           | Query subject                                                                                                | Records                    | Description                                                                                                                                                                                                                                                                                                                                                                   |
|----------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------|----------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| dataset_tweet-<br>scraper_2026-<br>05-14_22-14-<br>54-620.json | Quote-tweets of May 8,<br>2026 "Dead Man's<br>Switch" broadcast<br>(tweet identifier<br>2052837253408280726) | 1<br>(noResults<br>marker) | Apify negative-result return. The hash digest of this file is identical to the hash digest of the negative-result return inventoried in the Second Supplement, paragraph 18 (file dataset_tweet-scraper_2026-05-14_22-02-27-036.json), because the Apify platform's noResults marker file content is identical across queries regardless of the originating query parameters. |

### V. SHA-256 HASH MANIFEST

- The following table identifies each of the nine scrape files comprising the May 14, 2026 Extended Scrape Evidence by filename, captured size in bytes, and SHA-256 cryptographic hash. The hash values were computed using the Python hashlib.sha256 implementation on the as-stored binary content of each file at the file path under Defendant/Counter-Plaintiff's working directory.

| # | Filename | Size<br>(bytes) | SHA-256 |
|---|----------|-----------------|---------|
|---|----------|-----------------|---------|

|   |                                                    |                                                                             |
|---|----------------------------------------------------|-----------------------------------------------------------------------------|

14. The nine foregoing files, together with the three files identified in the Second Supplement and the eighteen files identified in the First Supplement, constitute the complete public-record X scrape evidentiary record captured by Defendant/Counter-Plaintiff between May 12, 2026 and May 14, 2026 in connection with the Pending Motion. The cryptographic hash of each file as recorded above represents the file content as captured and stored. Any subsequent modification to any file would produce a materially different hash digest and would be detectable by recomputation.

## VI. RELEVANCE TO THE PENDING MOTION

15. This Third Supplement does not assert any new substantive finding. The analytical findings supported by the May 14, 2026 Extended Scrape Evidence are set forth in Defendant/Counter-Plaintiff's Supplemental Brief in Support of Pending Emergency Motion for Preservation Order and Order Prohibiting Spoliation of Evidence, filed contemporaneously herewith. The function of this Third Supplement is to establish, on the record, the chain of custody, capture methodology, and cryptographic integrity of the additional public-record X scrape datasets on which those findings rest, so that the evidentiary record before this Honorable Court when ruling on the Pending Motion is complete and authenticable.
-

Respectfully submitted,

---
